

Easy Band Experts for Lap Band and Cosmetic Surgery for Loss Weight by Los Angeles Top Surgeons

We know you have questions about the Easy Band, and we are here to answer them. Our office in Beverly Hills is home to Julian and Mike Omid, skilled, board certified surgeons who can perform your Easy Lap Band surgery. Our work has been featured on Dr. 90210 and numerous other media outlets.

What can you expect after your Easy Lap Band operation? No doubt you'll be ready to enjoy your new body, but it will take some time to shed the weight. The majority of Easy Lap Band patients lose almost half of their excess weight within the first year after the procedure, sometimes more. If you employ good eating habits and get regular exercise, you'll have great results.

Immediately following the surgery, your most important concern is healing your body and getting on the road to recovery. It will take a few weeks before you can eat the foods you've been accustomed to. You'll need to drink only liquids and then progress to soft foods that are easy to digest. As time goes on you may want to restrict calories even further. If it is safe to do so, your Easy Lap Band surgeon will fill the band with more saline solution. This will tighten the Easy Lap Band and make the stomach pouch smaller.

If you are interested in the Easy Lap Band procedure but not sure of the first step, let us help you. Our staff can answer any questions you have about this operation. They can also schedule your free seminar with our expert Easy Band surgeons.
